

Teaching Techniques: Practical Tips

Dr. Patrio Chiu

Talent and Education
Development Office

香港城市大學
City University of Hong Kong

In your opinion, which one is the most important element for a teacher to deliver a lecture?

Being prepared

Stage presence

Passion

Being yourself

What are the characteristics of an effective/ineffective lecture?

Think for 60 seconds

Characteristics of an effective/ineffective lecture

Characteristics of an effective lecture	Characteristics of an ineffective lecture
Ex: Educator-student interaction	Ex: 100% educator talk, with limited or no interaction

Characteristics of an effective/ineffective lecture

Characteristics of an effective lecture	Characteristics of an ineffective lecture
Educator-student interaction Two-way communication Educator-student questions Shared responsibility for active learning Small group, problem-solving activities Variety of supporting media Limited note taking required	100% educator talk, with limited or no interaction One-way communication Few if any questions Student depends on educator for all information No student activities No supporting media Extensive note taking required

What is important?

Content:

What is your *message*?

What do you want them to remember?

Audience:

Who are you speaking to?

Why are they there?

What do they need to understand?

Are they familiar with the topic?

Context:

Why are you speaking to *this* group at *this* time?

How large an audience will you be addressing?

How large is the room?

What audiovisual support will you have (or need)?

How much time are you allotted?

Any effective talk must do **3** things

Think for 30 seconds

Communicate your **arguments** and

evidence

Persuade your audience that they are

true

B

entertaining

and

interesting

'Successful' speaking

"The most successful speakers use few visual aids, relying instead on their presentation skills; this engages the audience more effectively, and could generate and stimulate more interest.

At the end of the day, you want to be remembered."

Oliver Love, Senior consultant at Active Communication

Do **YOU** know the
number one skill of
outstanding presenters
?

Tell **stories**

**Do YOU
KNOW**

?

To **effectively communicate**, we must realize that **we are all different in the way we perceive the world** and use this understanding as a guide to our communication with others

Anthony Robbins

Visual

Learners

About 40 - 55% of
us are visual

Auditory

Learners

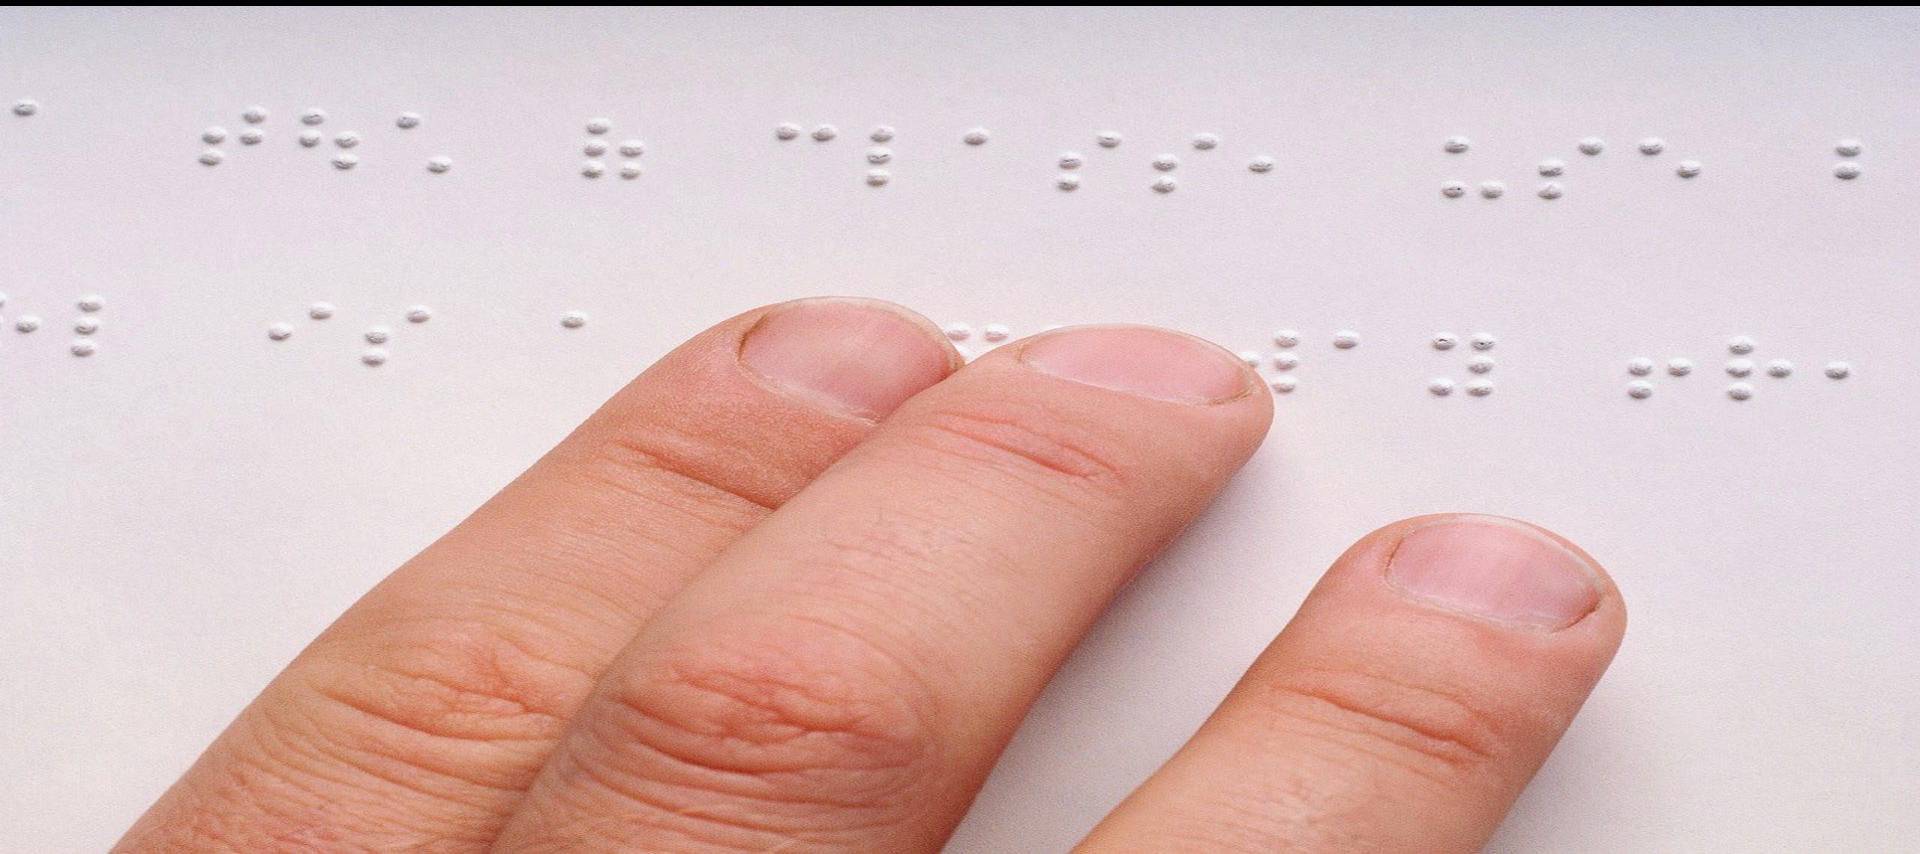

People learn through
listening

20% to 30%

Kinesthetic Learners

This group of people learns by doing, moving, and touching. "hands-on."

To see is to believe

Presentation Helper

Text
7%

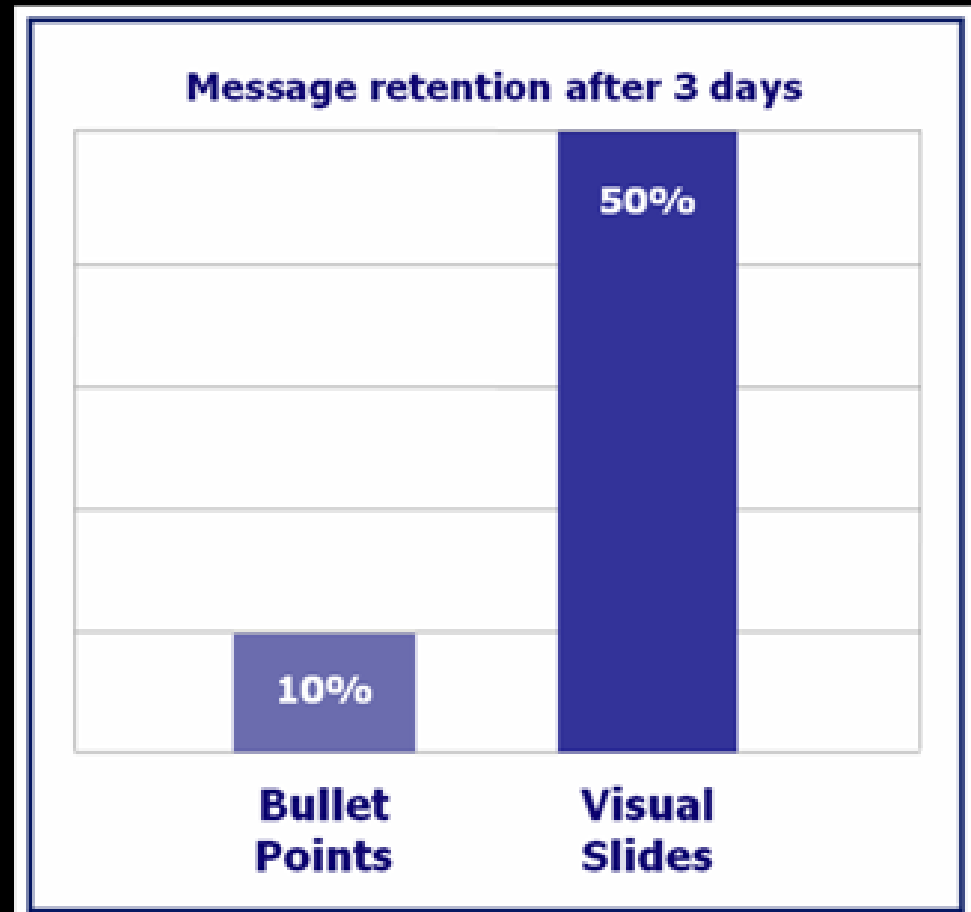

Visual
55%

Vocal
38%

To be visual is the **key**

Using **visual slides** has a dramatic effect on message retention

Wharton Research Centre

Does group size affect the planning of your Teaching and Learning Activities [TLAs]?

The number of participants attending a lecture has a significant impact on how the lecture is presented

Group size determines

1. the use of questions,
2. amount of interaction,
3. selection and use of media (e.g. slides, video, audio)
4. and use of small group activities such as case studies, role plays and problem-solving exercises.

The most common form of interaction during a lecture is **questioning**

The **Voice** is
probably the
most valuable
tool of the
presenter

Speaking to a large group is facilitated by

1. keeping your chin up,
2. varying the pitch and tone of your voice, and
3. being sure your voice does not drop at the ends of sentences.

What can
we do?

REHEARSE

To fail to prepare is to prepare to fail

Joelle Woo, director of
Microsoft Hong Kong

"From the very beginning, I created **opportunities** for them **to get involved** with customers... Before every seminar, I used to make them **rehearse and rehearse**, but now they are better speakers and compete among themselves to improve."

Be prepared

Clearly organize your **3 or 4 main concepts**

Pay particular attention to your **introduction, transitions, and conclusion.**

Smoothly connect and relate your major points, and provide a summary

Ideally with a bridge to the next lecture.

Planning Interactive Lectures

Effective lectures do not just happen –
they are planned.

Planning Interactive Lectures

Effective lectures do not just happen – they are planned. The educator must:

Establish the purpose + outcomes of the lecture

Consider the logistics of the lecture

Plan a variety of approaches (e.g., use of questioning, media, small group activities)

Prepare a set of lecture notes (if needed)

Emphasize major points

it's crucial for the teacher to use voice, gestures, and word choice to provide emphasis. Phrases such as “the second main point here is...,” “in contrast to A, B has the following properties...,” or “from the preceding three points we can conclude X”

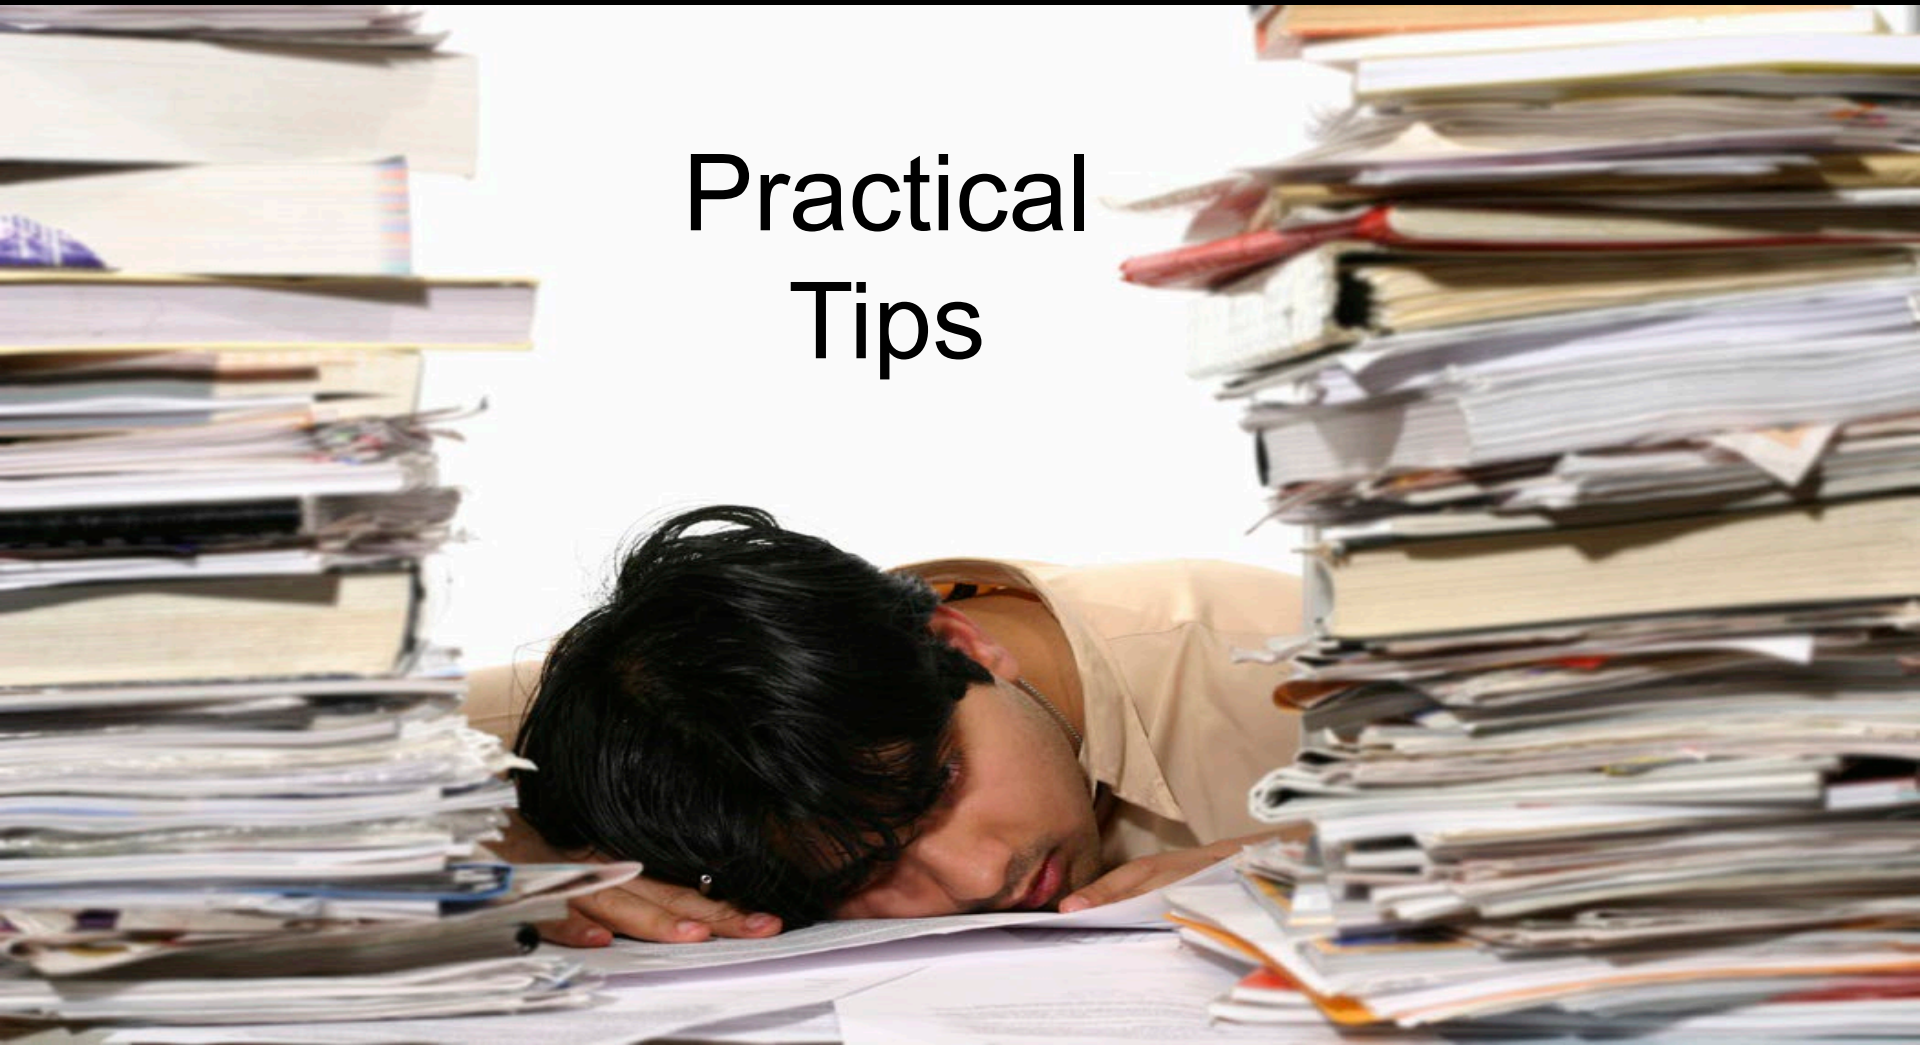

Emphasize main points and show the relationships between points.

The power of the pause

What works?

Practical
Tips

The beginning of the lecture

Use an introduction that will catch the listener's interest.

The beginning of the lecture

Suggestion: Raise a question to be answered by the end of the lecture

Example:" By the end of the hour, you should be able to answer the question, "Are engaging lectures better than traditional lectures?"

The beginning of the lecture

Suggestion: Explain the relationship or relevance of lecture content to laboratory exercises, homework problems, professional career interests, the "real" world

Example: "Today's lecture is about the cost of living indices, a topic in macroeconomics which should help you understand the recent discussions in the White House related to inflation."

NEXT

Suggestion: Relate lecture content to previous class material.

Example: "For the past few weeks, Skinner, Osgood and others who take a behaviourist view of language acquisition have occupied our attention. Today, let's look at a different perspective on language acquisition and learning. We'll spend the rest of this week and the next of understanding this view and comparing it with the behaviourist's.

The body of the lecture

Allow for some flexibility in the amount of content to be presented in order to respond to student questions and comments.

Determine the key points to be developed during the class session

Compare-Contrast: A two-sided discussion of a given topic is presented.

Example: A lecture is organized around the advantages and disadvantages of using the lecture method of instruction.

The body of the lecture

Problem-Solution: The statement of a problem is followed by alternative solutions.

Example: A lecture on the North Korean nuclear crisis may begin with a statement of the foreign policy problem followed by a presentation of the alternative solutions available to the Superpowers

The closing

- a) Answer any questions raised at the beginning of the lecture.
- b) Provide closure for the lecture.

Suggestions include:

1. Briefly summarize lecture material and preview what lies ahead.

Example: "Today I have identified five phases of the reflective thinking process. Tomorrow we will see how these phases can be useful for our understanding of human learning."

The closing

2. Relate lecture material to past or future presentations.

Example: "During the next lesson, you will form discussion groups and get some experience applying the evaluation model discussed in class today to the first three case studies in your file."

3. Ask a student to summarize the lecture's key ideas

Example: "Who can summarize the key issues developed during today's lecture?"

Gagné's Nine Events of Instruction (1965)

1. Gain attention of the students. ...
2. Inform students of the objectives. ...
3. Stimulate recall of prior learning. ...
4. Present the content. ...
5. Provide learning guidance. ...
6. Elicit performance (practice) ...
7. Provide feedback. ...
8. Assess performance. ...
9. Enhancing retention and transfer. ...

60 mins

During a presentation, my audience will **hear** stories, **watch** video, and **engage** in discussion based on my questions.

Any great (and simple) solution?

Setting the scene = Introduce the topic
Key message = main point

You repeat it at the end
to help the audience remember it

a hook

Every hit song has a
"hook," the part of the
song that is **repeated**
and memorable

So what does it all mean?

Presentation skills are important

Start practising
